PERSONAL SUMMARY

Computer science graduate with experience in a technical support role and a strong, project-backed foundation in AI and machine learning. Skilled in Python and AI with a track record of building end-to-end applications, including a fraud-detection pipeline and a source-grounded healthcare chatbot named Maamta AI.

EXPERIENCE

Technical Support Engineer (Intern)

June 2026

Sybird Private Limited, Lakson Group, Karachi (StormFiber Campaign)

- Handled inbound calls from internet subscribers reporting connectivity issues, verified customer accounts, diagnosed problems, and guided users through troubleshooting steps.
- Logged tickets and complaints for each case, escalating unresolved issues to relevant teams to ensure timely service restoration in line with productivity targets.

PROJECTS

Fraud Detection & AML Transaction Monitoring System

https://github.com/abrar35-cyber/Fraud_Detection_Machine_Learning

- Built an AML transaction monitoring pipeline on the PaySim dataset to reduce false-positive fraud alerts.
- Combined unsupervised Isolation Forest with a cost-sensitive Random Forest classifier using stratified sampling techniques.
- Achieved a 98.1% fraud capture rate while keeping false alerts to just 5.5% of flags.

Student Performance Prediction

<https://github.com/abrar35-cyber/student-performance-prediction>

- Built a Python (pandas, scikit-learn) linear regression model to predict students' final academic scores.
- Cleaned and preprocessed the dataset, then analysed feature patterns to identify anomalies before training.
- Evaluated model performance using mean squared error.

Movie Recommendation System

https://github.com/abrar35-cyber/Movie_Recommendation_System

- Built CineMatch, a content-based movie recommendation web app using Next.js (frontend) and FastAPI (backend).
- Implemented cosine similarity to generate personalised movie recommendations.
- Integrated the TMDB API to pull live movie data into the app.

Maamta AI

https://github.com/abrar35-cyber/Maamta_AI

- Built a source-grounded maternal and newborn health triage assistant for Pakistan, supporting Roman Urdu and English.
- Implemented TF-IDF and cosine-similarity retrieval to ground responses strictly within approved national clinical guidelines.
- Added rule-based danger-sign detection and Groq API integration, with mandatory patient vitals intake for safe triage.

HACKATHON

Group Leader, Pak Angels Hackathon

September 2026

- Led a team of 6 members as group leader, coordinating the team to build Maamta AI, a source-grounded maternal and newborn health triage assistant, during the hackathon.

SKILLS

AI & Programming: Generative AI, Agentic AI, LLMs, prompt engineering, Python (pandas, numpy), HTML, CSS

Technical & Productivity Tools: Software development lifecycle, database (SQL, SQLite), basic web technologies, information security concepts, MS Excel, Google Sheets, MS Office, Google Workspace, basic reporting

Professional Skills: Resource coordination, stakeholder communication, cross-functional collaboration, time management, multitasking, documentation, follow-up and status tracking

VOLUNTEERSHIP

Organising Team Member, KhiNext

June 2026

PC Hotel, Karachi

- Supported on-ground coordination and event logistics, working across multiple people and moving parts under time pressure for one day.

EDUCATION

Bachelor of Science (Computer Science)

2022 - 2025

University of Sindh, Jamshoro

PROFESSIONAL CERTIFICATIONS

Google Prompt Engineering Essentials, Google AI Essentials, Google AI Digiskills WordPress, Digiskills Graphic Design, Digiskills Freelancing
